JOINT UNDERTAKING

# CONCEPT FOR A COMMON EUROPEAN HRS AVAILABILITY SYSTEM

Presentation on project process and results  
FCH 2 JU Programme Review Days 2017, 24.11.2017  
Nadine Hoelzinger, consortium leader (Spilett)

# PROJECT MOTIVATION AND AIMS

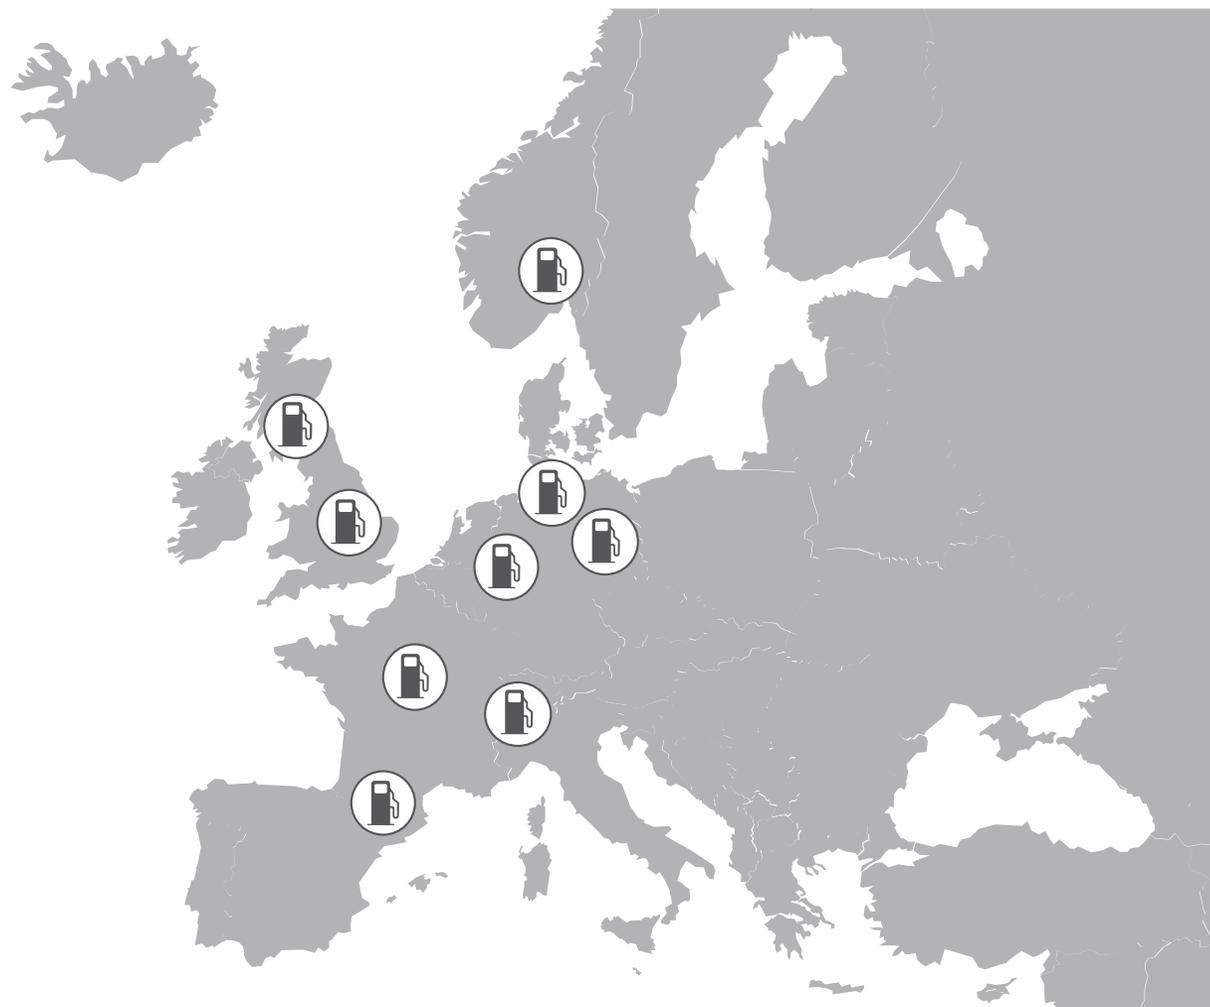

## Initial situation and project context

- Despite the various on-going coordinated programs, Europe's HRS network will remain **relatively sparse** for many years.
- While various websites seek to show the extent and status of HRS by country / across Europe, there is no definitive source of reliable, up-to-date information on the **real-time availability** of HRS across all key markets.

## Aim of the European HRS availability system

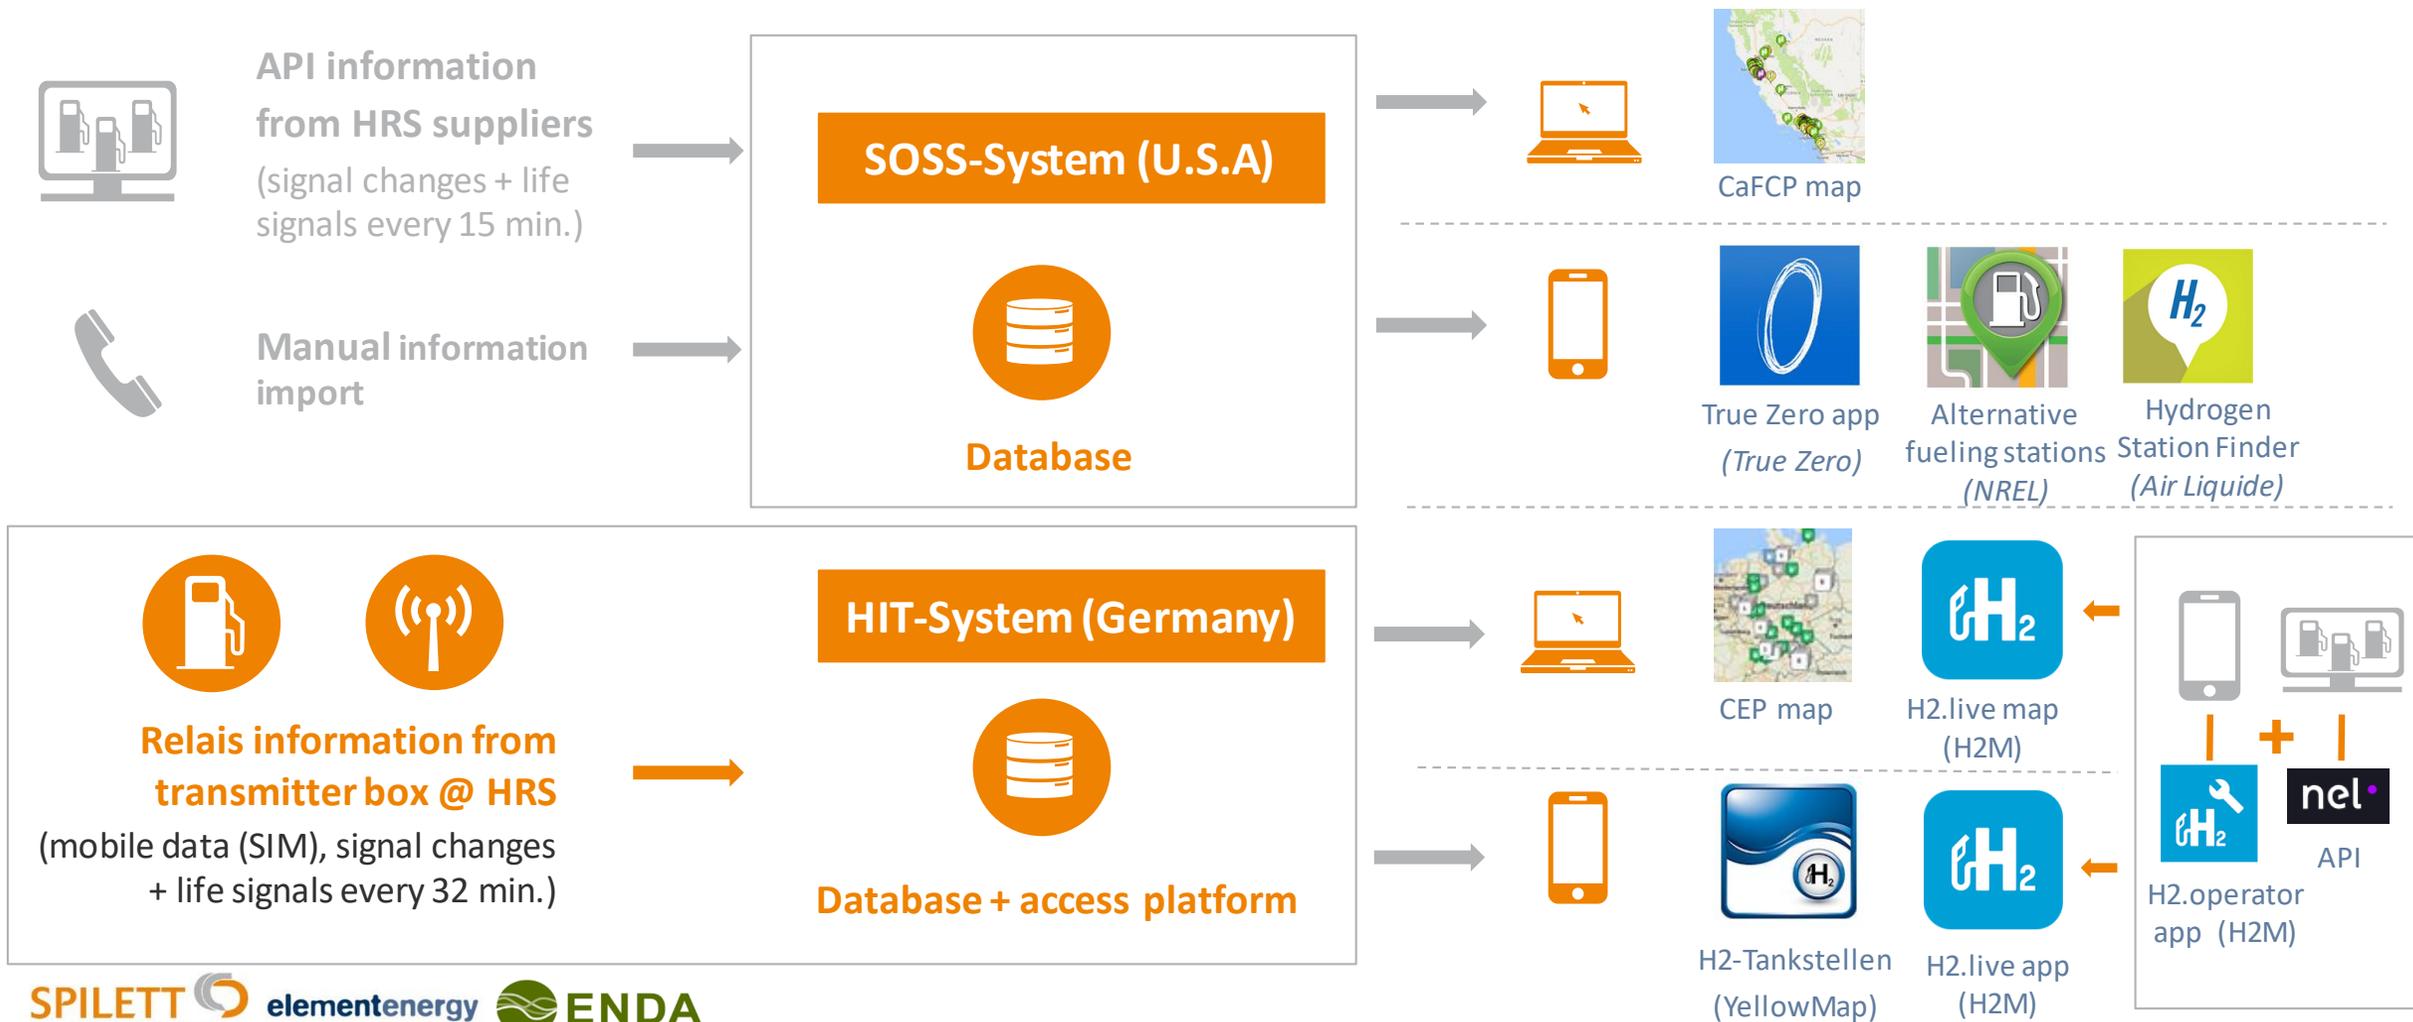

With a common European system on real-time availability we want to

- offer a service to the FCEV first users by providing a complete and reliable information source on their filling availabilities (real-time availability @standard definition of availability),
- show that the European grid of HRS is progressing not only by size but also by availability.

# OVERVIEW ON (SEMI-) AUTOMATED 700 BAR FCEV CUSTOMER INFORMATION SYSTEMS FOR HRS AVAILABILITY

# PROJECT CONSORTIUM AND HRS DATA COMMUNITY

PROJECT DURATION: 28.7.2017 – 28.1.2018

## Project consortium

**Project lead**  
Overall system design

**Technical support and realisation**

**Moderating discussions**  
Developing business case models

## Participating HRS data community

*(definition of availability, concept for data acquisition and storage)*

## Interaction of OEM and Third Parties perspectives

*(definition of export)*

# PROJECT PROCESS AND ACTIVITIES

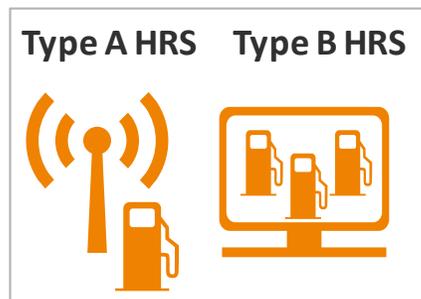

## Activities

- Q3 2017 Define a common standard**
  - Engage with the HRS data community to agree on a common definition
  - Draft a „strawman document“ to ease discussions
  - Organize a workshop (21.9.17)
- Q3 2017 Find a technical solution**
  - Identify and customize hardware to transmit signals for type A HRS (no API interface from plant monitoring)
  - Define standard API interface (open source based)
- Q4 2017 Test the concept**
  - Identify trial site and organize the test campaign
  - Customize, ship and install transmitters to type A sites
  - Integrate individual APIs for type B sites
  - Prepare map for trial
- 2018 Implement the system**
  - Analyze cost of roll-out
  - Develop business models
  - Discuss financing and business models with all stakeholders
  - Recommend roll-out strategy for FCH 2 JU

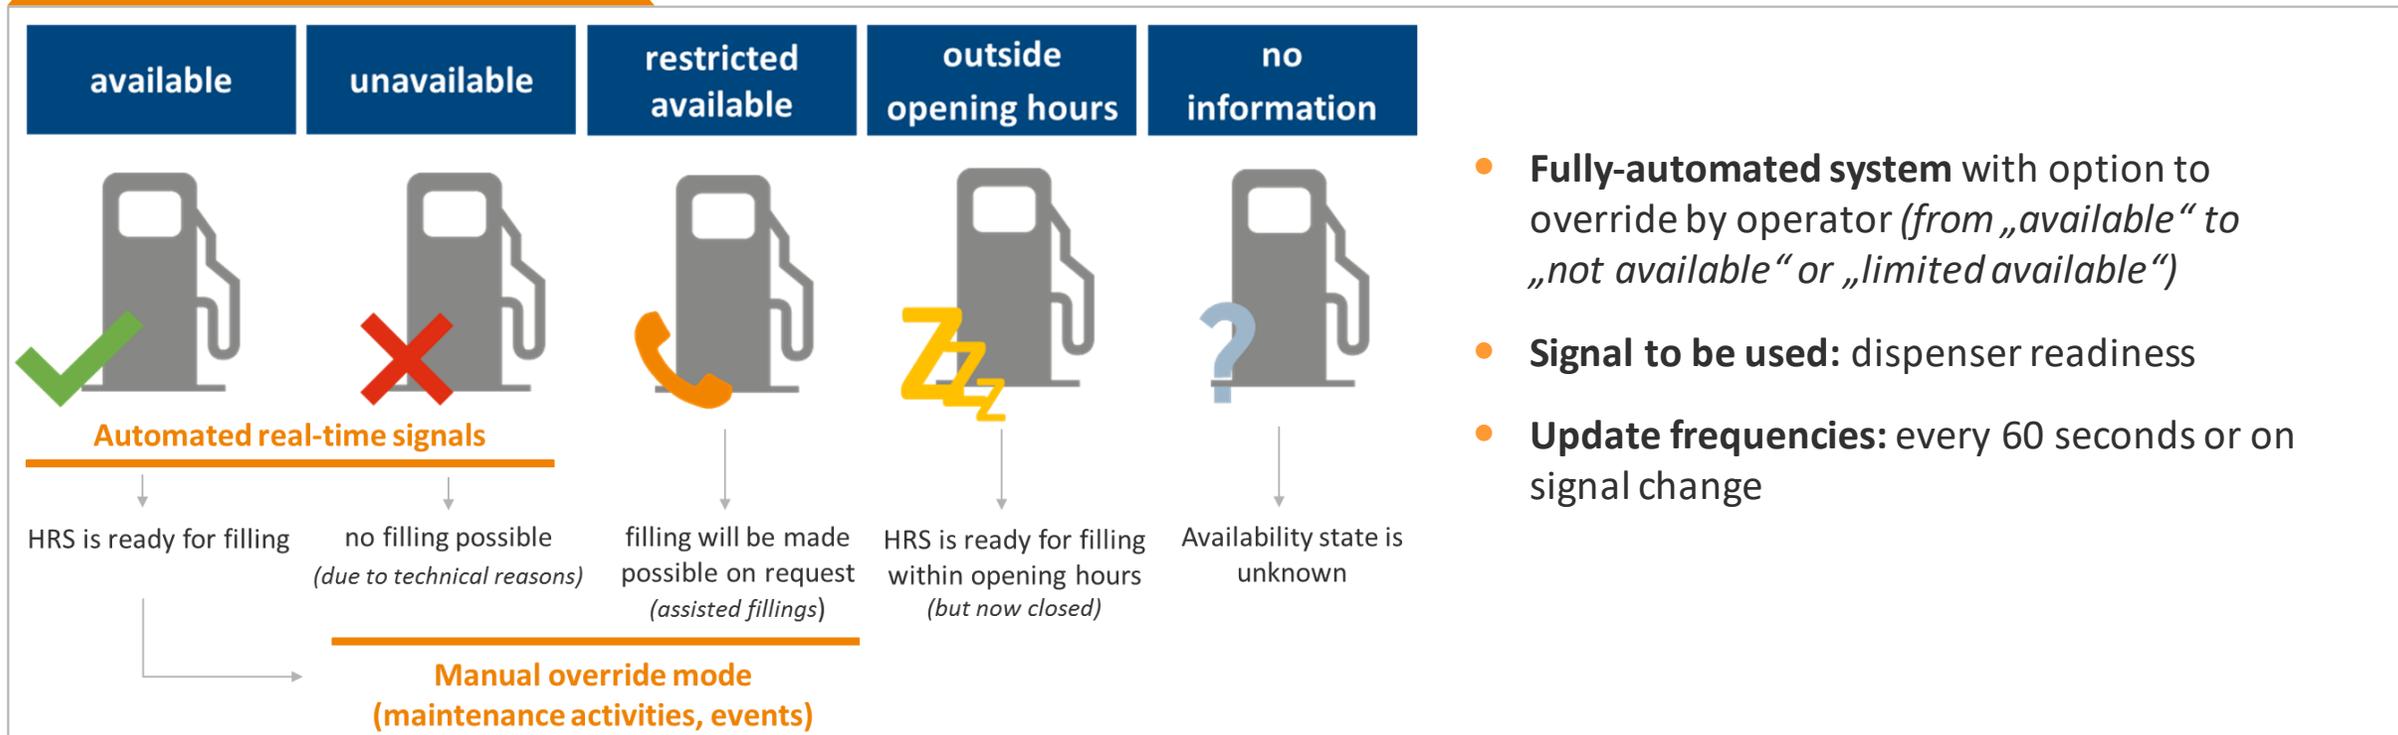

End of project phase 1

## Results

# RESULTS: STANDARD DEFINITION ON AVAILABILITY

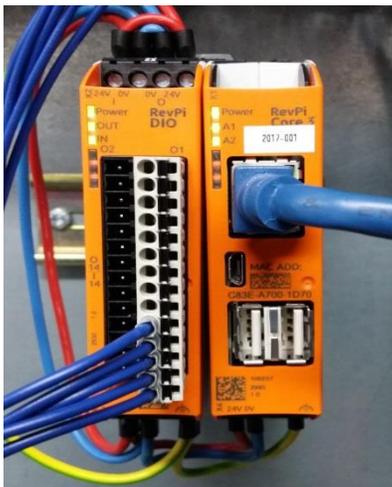

# RESULTS: TECHNICAL SOLUTION

## Type A signal transmission

### Revolution Pi

### Manual Switch

## Type B signal transmission

### Standardized API

POST /maintenance/{hrs\_uuid}

**DESCRIPTION**  
Schedule downtime for a specific HRS

**REQUEST PARAMETERS**

<b>hrs_uuid</b>	ID of HRS
<b>required</b>	
<b>type</b>	string (uuid)
<b>in</b>	path
<b>begin</b>	Begin of maintenance
<b>required</b>	
<b>type</b>	string (dateTime)
<b>in</b>	query
<b>end</b>	End of maintenance
<b>required</b>	

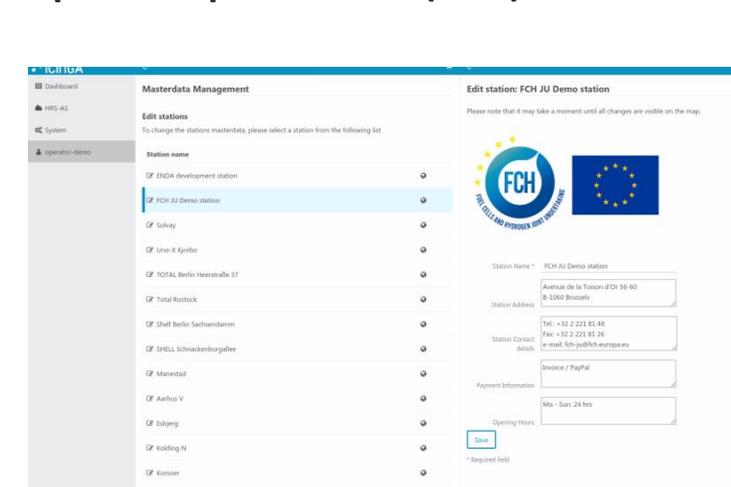

### Individual API

```

{
  "h2m": {
    "columns": [
      "ID",
      "SerialNumber",
      "Availability",
      "Service",
      "EventCommentExternal",
      "StationCommentExternal",
      "LastChanged",
      "LastReceived",
      "LastUpdated"
    ],
    "records": [
      {
        "ID": "1",
        "SerialNumber": "20",
        "Availability": "1",

      },
      {
        "ID": "2",
        "SerialNumber": "22",
        "Availability": "1"
      }
    ]
  }
}
    
```

## Data access and storage platform

### OpenAPI Specification (OAS) format

# RESULTS: TECHNICAL SOLUTION

Criteria	Type A HRS	Type B HRS
<b>Origin of signal</b>	<ul style="list-style-type: none"> <li>• HRS via relais and transmitter</li> <li>• LAN, WiFi or mobile data (modem, SMS)</li> </ul>	<ul style="list-style-type: none"> <li>• HRS suppliers /operators plant monitoring system via API<sup>1</sup></li> </ul>
<b>Signal update</b>	<ul style="list-style-type: none"> <li>• Every 60 seconds</li> </ul>	<ul style="list-style-type: none"> <li>• On signal change only plus life-signal every 60-240 min.</li> </ul>
<b>Manual override from „available“ to „not / limited available“</b>	<ul style="list-style-type: none"> <li>• On site via maintenance switch</li> <li>• Online via operator’s access platform</li> </ul>	<ul style="list-style-type: none"> <li>• Online via operators’ access platform</li> </ul>
<b>Manual override from „not available“ to „available“</b>	<ul style="list-style-type: none"> <li>• Not possible</li> </ul>	<ul style="list-style-type: none"> <li>• Online via plant monitoring (API)</li> </ul>
<b>Data access and storage platform</b>	<ul style="list-style-type: none"> <li>• Common database for all information (static &amp; dynamic) from type A / B HRS with operator’s individual interface, basic reporting function, open source based and json /xml-export function to third party applications (apps, maps, car navigation system...)</li> </ul>	

# PRELIMINARY RESULTS: PROOF-OF-CONCEPT

(30.10.2017 – 31.12.2017)

Type A HRS	State
<ul style="list-style-type: none"> <li>H2M / Shell, Berlin</li> <li>H2M / TOTAL, Berlin</li> <li>T&amp;R / Linde, <u>Fürholzen</u></li> </ul>	<ul style="list-style-type: none"> <li>Fully integrated and running</li> <li>Integration not yet started</li> </ul>
<ul style="list-style-type: none"> <li>BOC / <u>Hydrogenics</u>, Aberdeen</li> </ul>	<ul style="list-style-type: none"> <li>Integration not yet started</li> </ul>

Type B HRS	State
<ul style="list-style-type: none"> <li>H2M / ALAT, Offenbach</li> </ul>	<ul style="list-style-type: none"> <li>Integration not yet started</li> </ul>
<ul style="list-style-type: none"> <li>Air Liquide, Paris</li> <li><u>McPhy</u>, <i>tbd</i></li> </ul>	<ul style="list-style-type: none"> <li>Integration not yet started</li> </ul>
<ul style="list-style-type: none"> <li>Air Liquide, <u>Brussels</u></li> </ul>	<ul style="list-style-type: none"> <li>Integration not yet started</li> </ul>
<ul style="list-style-type: none"> <li>NEL, all HRS</li> </ul>	<ul style="list-style-type: none"> <li>Fully integrated and running</li> </ul>
<ul style="list-style-type: none"> <li><u>HvOP</u>, <u>Høvik</u></li> </ul>	<ul style="list-style-type: none"> <li>Integration not yet started</li> </ul>
<ul style="list-style-type: none"> <li>Shell / ITM, London</li> </ul>	<ul style="list-style-type: none"> <li>Integration not yet started</li> </ul>

**Legend**

- Fully integrated and running
- Integration not yet started

(all information as of Nov. 17th, 2017)

### HRS availability map

# PRELIMINARY RESULTS: PROOF-OF-CONCEPT

(30.10.2017 – 31.12.2017)

**Live-Demonstration:** <https://portal.hrs-monitoring.enda.eu/> (type B HRS from NEL live via API)<sup>1</sup>

Shell Berlin Sachsendamm

Type A HRS

ENDA development station

Type A HRS

(1) all pictures are inserted as place holder for the proof-of-trial. Operators / suppliers may insert pictures in individual user interface menu.

Copyright of pictures are with the owners (CEP, CEP partner, H2M, NEL)

# RECOMMENDATIONS FOR A EUROPEAN ROLL-OUT

(TO BE DISCUSSED)

	Potential source of funding	Arguments	Next steps
<b>Step 1:</b> Identify cost for roll-out and operation of the system	End users	<p>FCEV users already pay a premium and are used to free access information on charging points. Unlikely to be willing to pay directly for HRS availability system.</p>	<b>Recommendation to FCH 2 JU on how to roll-out and finance the system</b>  <i>(phase 2 of the project, beginning 2018)</i>
	Vehicle OEM	<p><i>Based on (limited) feedback to date:</i> The onus for showing HRS availability should be on HRS operators. Unlikely source of funding for HRS availability system (short term).</p>	
<b>Step 2:</b> Discuss and define business models and / or funding options for roll-out and operation	Advertising, sponsorship	<p>High degree of uncertainty over level of funding available.</p>	
	HRS operators	<p>Some willingness to cover costs of HRS availability system. General view: Costs should be borne by others in the near term, paying on-going costs is expected to be more feasible from the mid-2020s.</p>	
	HRS community	<p>Some form of syndicated request for funding (on behalf of the sector) to a trade association / grouping of companies with a stake and who stand to benefit from commercialization of hydrogen transport.</p>	
	Public funding	<p>Possible option for the early phase, but not sustainable in the longer term.</p>	

# SUMMARY OF THE SYSTEM FEATURES

- 1 Common definition of availability**  
The following availability states will be communicated: available, not available, restricted available, outside opening hours, no information
- 2 Agreement on signal to be used to indicate HRS availability**  
Dispenser availability, updated every 60 scond (type A HRS) or every signal change along with a life-signal every 60-240 minutes (type B HRS)
- 3 Suitable hardware for transmitting signals @type A HRS identified and configured**  
Revolution Pi with security architecture
- 4 Standardized API interface for integrating signals from type B HRS programmed**  
Integration of individual API interfaces possible (link to the standard API: <https://api.hrs-monitoring.enda.eu/v1>)
- 5 Open Source software for operators' platform and availability map implemented**  
Link to the map: <https://portal.hrs-monitoring.enda.eu/>
- 6 Export function to integrate live data of availability signals in own applications (apps, maps, navigation system...) included**  
Geojson interface with filter function to reduce data traffic: focus on updates of real-time availability information / of regional HRS
