Grande Region Hydrogen

Our European Economic Interest Grouping (EEIG) aims to develop and support a **renewable hydrogen ecosystem** on an unparalleled scale so far, available for all in the “Grande Region” made up of Saarland and Rhineland-Palatinate in Germany, Lorraine (Grand-Est) in France, and the Grand Duchy of Luxembourg.

The “Grande Region Hydrogen” is composed of **interconnected projects** that are relying on each other. This **fully integrated energy system** will help **balance hydrogen production and consumption**, by connecting **hydrogen valleys in Europe**. Furthermore, it will foster synergies to develop the **whole value chain** of the hydrogen market...

Grande Region Hydrogen: a crossborder H₂ ecosystem

Objective: to promote a hydrogen economy along the entire value chain

Grande Region
Hydrogen

Unsere Energie.
Notre futur.

Grande Region Hydrogen

Pioneer

A **first of its kind initiative** willing to share information, shape a common vision & frameworks

Non-profit organization

Open to new parties
sharing the same interests

Nucleus of European energy transformation

A crossborder H₂ **pipeline** grid enabling investments in H₂ **production via electrolysis** & gigafactories, **industrial consumption** (e.g. DRI for steel production), **mobility** services

Reindustrialization & Decarbonization of the Grande Region

Chicken & Egg Dilemma solved

Common objective for projects **commissioning**

Powerful investments

Applied for funding programs (CCfD, CEF, CEAG) & promoted as IPCEI

The members allong the H₂ value chain

H₂ production

Production massive d'hydrogène vert
Massive production of green hydrogen
