

Green Skills for Hydrogen

Erasmus+ project launched
in 2022.

33 partners in 15 countries

Industry stakeholders, VET providers, Higher education & research, Local and regional stakeholders, Regional National and European networks, Communication and Skills experts.

Key objectives:

- Identify **existing and emerging skills needs** in the hydrogen sector and define a sectoral **Skills Strategy**.
- **Design an innovative VET curriculum and develop training materials.**
- **Test the VET training programme** through pilot training with various target audiences in different countries.
- **Encourage the adoption of the VET training programme across Europe** and the widespread dissemination of project results and best practice guides, leading to the highest possible uptake and significant impact.
